

RIDO Delivery Execution and SLA Compliance

1. Electronic Proof of Delivery e-POD: Every delivery requires digital sign-off via e-POD containing: customer signature, OTP verification, and geo-tagged timestamp within 50 meters of recipient pin. Damaged parcels log return code DMG-01.

2. Cold Chain Verification at Destination: For pharmaceutical and perishable food shipments, receiver is provided digital cold-chain certificate generated by RIDO IoT sensors. If trip average exceeded permitted threshold +2C to +8C, consignee has legal right of refusal under SLA Section 9.2.

3. Delay Management: If in-transit delay exceeds 30 minutes past ETA due to traffic, dispatch engine recalculates secondary detour routes. Delays > 45 minutes trigger automated customer notification and account credit voucher.
