

RIDO SOP: Fleet Management and Maintenance

1. Pre-Trip Inspection Protocol: All drivers must complete the digital pre-trip inspection via the RIDO Driver App before starting any trip.

Mandatory checklist items: 1. Tire pressure must be within +/- 5 PSI of rated pressure 110 PSI for heavy trucks, 32-35 PSI for light EVs. 2. Brake pad clearance inspection. 3. Fluid levels. 4. Battery State-of-Charge must be minimum 80% for EV departures. Any vehicle failing critical items must be tagged Maintenance and cannot be dispatched.

2. Preventative Maintenance Schedule: Heavy diesel vehicles require A-Service every 15,000 km and B-Service every 45,000 km. Commercial EVs require high-voltage diagnostic checks every 20,000 km. Vehicles with Health Score below 75 must be routed to depot within 24 hours.

3. Reefer Cold Chain Unit Operations: Refrigerated transport units must be pre-cooled for 45 minutes prior to loading cargo. If internal telemetry logs a temperature deviation exceeding 2.0C above setpoint for more than 15 consecutive minutes, execute immediate diversion to cold-storage standby.
