

RIDO Corporate Fleet Policy and Energy Management

1. Fueling and EV Charging Guidelines: Diesel vehicles must refuel exclusively at authorized partner pumps using RFID corporate fuel cards. EV commercial vehicles must utilize designated 60kW/120kW DC fast chargers during scheduled breaks. Maximum EV fast charge depth is capped at 85% to preserve battery cycle life unless trip is greater than 250 km.
2. Incident and Damage Protocol: In the event of breakdown or collision, secure the vehicle and deploy safety cones 15 meters behind rear bumper. Click Emergency SOS in driver terminal. Report photos within 20 minutes.
3. Payload Limits and Overloading: Zero tolerance for overloading beyond registered Gross Vehicle Weight GVW. Vehicles with payload exceeding 95% rated capacity have route speed restricted to 65 km/h on expressways and 40 km/h in urban corridors.
