

RIDO Pharmaceutical and Vaccine Cold-Chain SLA

1. Deep Frozen and Bio-Pharma Temperature Tiers: Tier A vaccines require continuous deep frozen integrity -25C to -15C. Tier B pharmaceutical biologicals require standard cold-chain +2C to +8C. IoT dual-probe temperature logging is mandatory with 60-second telemetry polling intervals.
2. Thermal Deviation and Escalation Matrix: Any continuous thermal deviation exceeding 1.5C from setpoint for more than 10 minutes triggers automated Level-2 Escalation to Chief Logistics Officer, with automatic reroute to the nearest cold-chain certified standby depot.
3. Consignee Rights of Refusal: If temperature breach code DMG-01 is logged, consignee has mandatory legal entitlement to reject delivery under SLA Clause 9.2 with zero freight liability.
