

RIDO Fleet Training Dataset - Multi-Fuel and SOPs

Scenario 1: Cold-Chain Thermal Excursion on Vehicle V-104 8.9C vs target 3.5C. Status: CRITICAL COLD-CHAIN BREACH. Action: Immediate dynamic diversion to nearest cold-storage standby in Karnal. Generate e-POD non-compliance return code DMG-01.

Scenario 2: Multi-Fuel Route Optimization from Delhi to Jaipur 280 km for 8,000 kg cargo. Commercial EV consumes 266 kWh Cost: INR 2,261, 0.00 kg tailpipe CO₂, Net savings vs Diesel: INR 4,951 and 210.1 kg CO₂ offset. Diesel baseline consumes 78.4L Cost: INR 7,212, CO₂: 210.1 kg at 2.68 kg CO₂/L.

Scenario 3: Driver Shift Hours Compliance for Rajesh Kumar D-11. Reached 4.5 hours continuous driving limit. Status: MANDATORY SHIFT HALT. Action: Enforce 45-minute mandatory rest layby immediately. Daily shift ceiling capped at 8.0 hours.

Scenario 4: Commercial EV Battery Management for Vehicle V-103 SoC 18%. Status: LOW BATTERY WARNING. Action: Reroute to Indiranagar 60kW DC Fast Charger. Limit DC fast-charge depth to maximum 85% to preserve battery life cycle.
